ELECTROTHERAPY

It is stimulation by electric current, used to treat various pathological conditions of neuromuscular tissue, improve local circulation, reduce pain, increase range of motion and muscle strength. Electrotherapy includes: TENS current, DDM currents, interference currents, galvanic current and ionophoresis.

10 minut

30 PLN

MUD PACKS

Treatment consisting of covering parts of the body with mud in the form of patches. Heated mud slowly gives off heat. Under its influence, the deeper tissues become congested and, as a result, they become loosened. In addition, it provides valuable ingredients through the skin: organic acids and mineral salts, which have anti-inflammatory, bactericidal and bacteriostatic effects.

10 minut

40 PLN

MUD BATHS

These are baths with mud extract, giving the skin a unique smoothness. In addition, mud baths cleanse the body of toxins, reduce joint swelling and relieve inflammatory lesions.

LASER THERAPY

It is a procedure involving precise irradiation of tissues using laser light with biostimulatory parameters. It has anti-inflammatory, analgesic, anti-edema and improves microcirculation and accelerates tissue regeneration

5 minut

30 PLN

MAGNETOTHERAPY

It is an effective method of treatment consisting in subjecting a given area of the body to the influence of a pulsating magnetic field of low frequency. Magnetotherapy treatment reduces pain, inhibits inflammatory processes, strengthens the body's immunity and eliminates spasms.

10 minut

30 PLN

CRYOTHERAPY

The procedure involves local cooling of the body. Its effect is to relieve pain, reduce the activity of the inflammatory process, reduce muscle tension, reduce swelling, and consequently increase the mobility of cooled joints, increase muscle strength and shorten the time of injury treatment.

do 5 minut

30 PLN

ULTRASOUND

Treatment accelerating wound healing, analgesic, regenerating, increasing the extensibility of collagen fibers. It is characterized by deep thermal action.

do 5 minut

30 PLN

BRINE INHALATIONS

The treatment involves introducing brine by inhalation into the body. This reduces mucosal congestion and enhances the secretory function of the glandular cells of the respiratory tract, which leads to relaxation of the secretion. This facilitates expectoration and normalizes the secretory functions of the mucous membrane. The use of brine inhalations is indicated for diseases of the upper and lower respiratory tract.

10 minut

20 PLN

SOLUX LAMP

It is an electrical device emitting short radiation – visible white and infrared. The radiation reaches up to three centimeters into the tissue. It dilates blood vessels, improving blood circulation and reducing muscle tension and pain.

10 minut

30 PLN

SHOCK WAVE

Shockwave is a very effective method used in rehabilitation. It is one of the most effective methods of analgesic treatment for musculoskeletal disorders. The effect of the shock wave is analgesic, circulatory, and consequently there is a faster regeneration and healing of tissues. It is most often performed due to post-traumatic and degenerative changes in muscles, tendons, ligaments and joints.

80 PLN

DRY BATH IN OZONE

It involves immersing the body in the ozone-oxygen mixture. Ozone and oxygen penetrate the skin, improving blood flow to tissues and muscles. It also has anticoagulant, bactericidal and anti-inflammatory properties.

60 PLN

KINESIOTHERAPY

GYMNASTICS (DRY)

Strengthening, relaxing and analgesic exercises, usually used in osteoarthritis and spinal diseases, individually to the group of patients and their diseases.

25 minut

25 PLN
